

Client Environment Overview

Filing tag (please leave this line unchanged): MSP-1 · Client-specific · Visibility: MSP-confidential

A knowledge base article describing how this client's environment is set up, so anyone on the account can get up to speed quickly. Keep it high-level — we do NOT need IP addresses, hostnames or sensitive config; just the shape of the environment: roughly how many servers, which operating systems, and the main applications.

CLIENT-SPECIFIC — belongs to this MSP. Handle per the client's data agreement. Keep it HIGH-LEVEL: no IP addresses, hostnames, or sensitive network/configuration detail, and never passwords, keys or secrets. The shape of the environment is enough — describe WHERE access lives, not the credentials.

Environment summary

In a few lines: how big and how is IT shaped? Rough user count, number of servers, on-prem vs cloud — high-level only.

Key systems, OS & applications

The main platforms and applications, with rough counts: e.g. number of servers, the operating systems in use, key apps. No IP addresses or sensitive config.

Sites & locations

Offices, sites, remote setup — anything location-specific.

Access & where things live

Where access and tools are found (portals, consoles). Pointers only — NOT passwords or secrets.

Key vendors & support

Third parties, vendors, and who to contact for what.

Good to know / quirks

Anything unusual a newcomer would want to know.
