

Out-of-Scope Request

Filing tag (please leave this line unchanged): ISS-OOS · Client-specific · Visibility: MSP-confidential

Something this client asked for that sits outside the current scope. These are gold — they are often the first sign of an expansion opportunity. Capture it factually; no passwords or sensitive config.

CLIENT-SPECIFIC — belongs to this MSP. Handle per the client's data agreement. Keep it HIGH-LEVEL: no IP addresses, hostnames, or sensitive network/configuration detail, and never passwords, keys or secrets. The shape of the environment is enough — describe WHERE access lives, not the credentials.

Author (your name): _____

MSP / Client: _____

Date: _____

What was requested

In the client's own words if possible.

Why it's outside current scope

What boundary does it cross?

Who asked, and how often

Is this a one-off or a pattern?

What it would take

Effort, skills, or tools needed to take this on.

Expansion opportunity

Could this become more work we deliver? What would that look like?

Recommendation

Take it on / decline / revisit later — and why.
